SUMMARY

Full-stack developer and B.Tech CSE student with 3+ shipped production apps using React, Next.js, Node.js, and Python. Experienced integrating GenAI (Gemini, LLaMA, Groq) into full-stack systems. GSSoC open source contributor and 300+ DSA problems solved. Seeking a full-stack developer internship.

EDUCATION

G.L. Bajaj Institute of Technology & Management.	Greater Noida, UP
B.Tech in Computer Science & Engineering — 8.5/10 CGPA	Aug 2024 — May 2028
ASM ACADEMY — CBSE.	Amroha, UP
Intermediate (Class XII) — 87%	2024

TECHNICAL SKILLS

Frontend: React.js, Next.js 15, TypeScript, JavaScript (ES6+), Tailwind CSS, HTML5, CSS3
Backend: Node.js, Express.js, FastAPI (Python), REST APIs, Drizzle ORM
Databases: PostgreSQL (Neon), MongoDB, MySQL
AI / GenAI: Gemini 2.5 Flash, LLaMA 3.3-70B, Groq API, OpenAI API, RAG, Agentic AI, PyTorch
Cloud & DevOps: Vercel, Render, Google Cloud Platform (Vertex AI, Speech-to-Text, TTS), Git, GitHub, Postman
Auth & Payments: Clerk Authentication, credit-based access systems
Languages: JavaScript, TypeScript, Python, C++, Java
Relevant Coursework: DSA, Object-Oriented Programming, Database Management Systems, Operating Systems, Computer Networks

ACHIEVEMENTS

AI for Bharat Hackathon | National-level hackathon | [Certificate](#)
Earned certificate for building AI solutions in national-level hackathon focused on AI applications for India
GSSoC (GirlScript Summer of Code) | Contributor
Selected as open source contributor in one of India's largest open source programs with 20,000+ participants | [Profile](#)
Conducted peer learning sessions and mentored batchmates on problem-solving techniques.

PROJECTS

Revora AI — Autonomous AI Revenue Recovery | Platform Python, FastAPI, React, SQLite, Scikit-learn, Machine Learning | [GitHub](#) | [Live](#)

- Built an **AI-driven payment recovery platform** using FastAPI, React, and Scikit-learn that predicts recovery probability and uses a **4-class HistGradientBoostingClassifier** to dynamically select RETRY, CUSTOMER_NUDGE, HUMAN_REVIEW, or STOP actions.
- Designed an autonomous **Detect → Diagnose → Decide → Validate → Act → Observe → Recover** workflow with deterministic policy guardrails, customer opt-out enforcement, human-in-the-loop review, customer-action workflows, notifications, and database-backed state transitions.
- Processed **167 recovery cases and 65 recovery actions**, recovering **37 cases with \$24.7K+ simulated revenue**, with end-to-end tests validating successful recovery, policy blocking, customer-action handling, duplicate-execution prevention, and terminal-state consistency.

MiniDB — Relational Database Engine | C++, STL, Multithreading, File I/O | [GitHub](#) | [Demo](#)

- Implemented a relational database engine in C++ from scratch, including binary file persistence, custom query tokenizer and parser, and a shadow-copy transaction model for atomicity and rollback on failure
- Designed a buffer and page manager with LRU eviction policy and built a B-Tree index from scratch, with a query optimizer that routes equality lookups through the index instead of full table scans
- Implemented mutex-based locking for safe concurrent read and write access across multiple threads.

Concurrency-Safe Event Ticket Booking Platform | FastAPI, PostgreSQL, Redis, React, JWT | [GitHub](#) | [Live](#)

- Designed a concurrency-safe seat reservation system using PostgreSQL row-level locking to prevent double-booking under simultaneous requests
- Implemented Redis-backed caching and distributed rate limiting (replacing in-process alternatives) to ensure consistency across multiple backend instances - Built a simulated payment gateway with idempotency keys to guarantee exactly-once charge processing on retried or duplicate requests
- Containerized and deployed the application using Docker on AWS EC2, secured API endpoints with JWT authentication, and remediated an IDOR vulnerability identified during security testing.

CERTIFICATIONS

Machine Learning Simplilearn Certificate	2026
Web Development IBM Badge	2026
